AltaGas – Advisor, EHS (REEF)

Location: Prince Rupert, BC
Salary: $84,000-$105,800/ year
Schedule: Monday to Friday – 40-hour work week.
Safety Sensitive: Yes

You'll join AltaGas at a pivotal moment supporting the Ridley Island Energy Export Facility (REEF) as it transitions from commissioning into full operations. This is a rare opportunity to be part of a major Canadian energy asset at the ground level, shaping how safety, environmental stewardship, and operational excellence come to life day-to-day. We're looking for someone who is hands-on, curious, and motivated to grow. While experience matters, we're equally focused on finding the right person - someone who brings strong judgment, a proactive mindset, and a genuine commitment to building safe and efficient operations. This role will evolve. Early on, you'll be immersed in commissioning, start-up, and contractor coordination. Over time, you'll grow into a core EHS partner supporting steady-state operations across marine export and rail offloading.

What You'll Do

- Be a visible, trusted presence in the field, supporting safe work during commissioning and ongoing operations
- Support the execution and evolution of AltaGas' EHS programs, procedures, and standards
- Lead safety conversations - toolbox talks, orientations, and day-to-day engagement with the workforce
- Partner with operations, maintenance, and contractors to ensure safe, compliant execution of work
- Conduct field inspections, audits, and observations, and help drive corrective actions to completion
- Support incident response and investigation, including root cause analysis and learnings
- Contribute to emergency preparedness planning and participate in drills and exercises
- Support environmental compliance and field execution of site environmental plans
- Assist with regulatory reporting, documentation, and engagement as required
- Help ensure strong site security practices and access controls

What You Bring

- 1-3 years of EHS experience in an industrial, construction, or operational setting
- A practical, solutions-oriented mindset and ability to operate independently in the field
- Strong communication skills and the ability to influence and build trust with diverse stakeholders
- A willingness to learn, adapt, and grow in a fast-paced, evolving environment
- Exposure to energy, marine, rail, or regulated environments is an asset - but not required
- Post-secondary education in Occupational Health & Safety or a related field (preferred)

Why Join

- Work at one of Canada's most important energy export facilities, connecting Canadian energy to global markets

- Play a key role from commissioning through to full operations, with real influence on how EHS is embedded
- Gain exposure across marine, rail, and federally regulated operations with strong development potential over time
